

Project Design Phase

Proposed Solution

Date: 24 June 2026

Project Name: Metro Ticket Generating System in ServiceNow

Proposed Solution

S.No	Parameter	Description
1	Problem Statement (Problem to be solved)	Metro passengers often face long queues at ticket counters, delays in ticket purchasing, manual fare calculation, dependency on paper tickets, and limited access to digital ticketing services. These challenges reduce commuter convenience and increase operational effort.
2	Idea / Solution Description	Develop a Metro Ticket Generating System in ServiceNow that enables passengers to book metro tickets through a Service Portal. The system will allow users to select source and destination stations, passenger type, and ticket quantity. It will automatically calculate fares, process digital payments, generate QR-code-based digital tickets, send email confirmations, and maintain ticket history.
3	Novelty / Uniqueness	The solution combines ServiceNow Service Catalog, automated fare calculation, QR-code ticket generation, digital payment integration, and analytics dashboards in a single platform. It provides a completely paperless and automated metro ticketing experience.
4	Social Impact / Customer Satisfaction	The solution improves commuter convenience by reducing waiting time, enabling cashless transactions, and providing instant digital tickets. It promotes eco-friendly transportation through paperless ticketing and enhances overall passenger satisfaction.
5	Business Model (Revenue Model)	Revenue is generated through metro ticket sales. Additional revenue opportunities include smart travel subscriptions, premium commuter services, digital advertisements, and partnership-based promotional offers.
6	Scalability of the Solution	The solution is built on the ServiceNow cloud platform and can easily scale to support multiple metro stations, thousands of daily passengers, integration with mobile applications, smart cards, digital wallets, and future smart-city transportation initiatives.

Purpose / Vision

To provide a fast, secure, paperless, and user-friendly metro ticketing system that enhances commuter convenience, improves operational efficiency, and promotes digital transformation in public transportation.
